

## MOTORIZED ARTWORK SYSTEM

### Image information:

Customer supplied digital images must be accompanied by a copyright authorization form. We cannot use customer supplied art on canvas. Our images are digitally printed on a wide format printer using specially formulated archival inks. The resolution of the final printed image should be 75 DPI or greater. For most situations this is going to be a 5 to 6 mega-pixel image. The aspect ratio of the image must be the same as that of the frame aperture opening. If the image is not the correct aspect ratio then this can be corrected by cropping or squeezing the image using an image editor. We can modify your digital image as necessary.

### Dimensions: (see diagram below)

- A. Frame aperture opening, same as display width.
- B. Frame aperture opening, same as display height.
- C. Rough opening,  $A + 6\text{-}3/4\text{'}$ .
- D. Rough opening,  $B + 6\text{-}3/4\text{'}$ .
- E. Outside frame width. \*
- F. Outside frame height. \*
- G. If you have a need to supply your own frame then here are the rules: frame moldings must be a minimum of 4-1/4" wide including the liner. The backside of the frame and liner must be flat, flush and on the same plane. If there is no liner then the frame must not have a rabbet. There is no discount for supplying your own frame due to the liability we incur when handling customer supplied components.

\*Outside frame dimensions vary greatly with the style of the frame. If the outside dimension of the frame is critical please contact us for specific details according to your frame selection. The frame is held in place with four magnetic catches, one in each corner of dims C and D.

### Optional back box:

The optional back box is made for surface mounting on the wall and is black in color. The back box is not necessary if you plan on mounting your plasma display in a wall recess. If you plan on mounting the back box in a wall recess then the rough opening must be 1-1/2" larger in height and width.

### Size restrictions:

- The absolute minimum aperture width is 15".
- The absolute minimum aperture height is 12".
- The maximum aperture width is 60" as long as the aperture height does not exceed 36".
- The maximum aperture height is 60" as long as the aperture width does not exceed 39".

---

We can custom quote motorized artwork that exceeds the above size restrictions up to 120" x 120". Please contact us with your specific details.
